

Kitchen Level P&L Dashboard — Simple Insights Explanation

1. KPI Cards (Top Summary Cards)

These cards give a quick overall business summary.

Total Revenue — ₹736.12 Cr

What it means

This is the total money earned by all kitchens combined.

Insight

The business is operating at a very large scale.

A revenue of ₹736+ Crores shows:

- Strong customer demand
 - Large operational network
 - High order volume across cities
-

Gross Margin — ₹429.11 Cr (58.3%)

What it means

After paying direct food and packaging costs, the company still keeps ₹429 Cr.

GM% = 58.3%

Meaning:

For every ₹100 earned:

₹58 remains after direct kitchen costs

Insight

This is a healthy gross margin.

It suggests:

- Good pricing strategy
- Efficient procurement
- Controlled ingredient cost
- Strong contribution margins

The company is not overspending on raw materials.

Kitchen EBITDA — ₹143.79 Cr (19.5%)

What it means

This is the actual operational profit after expenses like:

- Salaries
- Rent
- Electricity
- Operations

EBITDA% = 19.5%

Meaning:

For every ₹100 earned:

₹19.5 becomes actual operational profit

Insight

An EBITDA margin near 20% is considered strong for cloud kitchens.

This means:

- Operations are profitable
 - Expenses are reasonably controlled
 - Kitchens are converting revenue into profit efficiently
-

Stores — 344

What it means

The company operates 344 kitchens.

Insight

This shows:

- Large business scale
- Multi-city operations
- Complex operational management

Managing this manually would be difficult, which is why analytics becomes important.

Profitable — 89%

What it means

89% of kitchens are profitable.

Only a small portion are loss-making.

Insight

This is one of the strongest indicators in the dashboard.

It means:

- Most kitchens are financially healthy
- Business model is working successfully
- Operations are generally optimized

But remaining 11% stores need attention.

2. Revenue & EBITDA by Month Chart

This graph compares:

- Revenue
- Gross Margin
- EBITDA

across months.

What We Observe

Revenue remains fairly stable every month.

There are no sudden drops.

EBITDA also stays consistent.

Main Insight

The business has stable operations.

This means:

- Customer demand is consistent
- Business is not highly seasonal
- Operations are predictable

This is very good for long-term planning.

Additional Insight

January 2024 shows slightly higher performance.

Possible reasons:

- Higher customer demand
 - Seasonal sales increase
 - Better operational efficiency
-

Gross Margin Observation

Gross margin bars remain very close across all months.

Insight

Ingredient and food costs are under control.

The company maintains operational consistency.

There are no major spikes in food cost inefficiency.

EBITDA Trend Observation

EBITDA line remains stable around the same level.

Insight

The company is maintaining operational profitability consistently.

This indicates:

- Stable cost structure
 - Controlled operational expenses
 - Efficient kitchen management
-

3. EBITDA Distribution Donut Chart

This chart divides kitchens into:

- Positive EBITDA
 - Negative EBITDA
-

Observation

Almost the entire chart is green.

Only a small red portion exists.

Insight

Most kitchens are profitable.

This means:

- Strong operational model

- Good business execution
- Efficient revenue generation

The few negative kitchens may have:

- Poor location performance
 - High rent
 - Low order volume
 - High operational expenses
-

4. EBITDA Histogram

This chart shows:

How profitability is distributed across kitchens

Observation

Most kitchens fall into positive EBITDA range.

Very few kitchens are in negative range.

Insight

This confirms:

- Profitability is not concentrated in just a few stores
- Majority of kitchens perform reasonably well

This reduces business risk.

Additional Insight

Some kitchens show extremely high EBITDA.

These may represent:

- Best-performing locations
- High-demand zones
- Operational benchmarks

These kitchens can be used as models for expansion.

5. Revenue Trend Chart

This chart tracks overall monthly revenue.

Observation

Revenue remains consistently high.

No large fluctuations appear.

Insight

This indicates:

- Stable customer demand
- Strong brand performance
- Reliable business operations

The company likely has repeat customers and stable market presence.

6. Margin % Trend Chart

This chart tracks:

- GM%
- EBITDA%

over time.

Observation

Margins remain stable throughout all months.

Insight

The company maintains consistent operational efficiency.

This means:

- Food costs are controlled
- Expenses are stable
- Pricing strategy is effective

Stable margins are often more important than rapidly growing revenue.

7. City-wise Performance Chart

This compares cities based on:

- Revenue
 - EBITDA%
-

Ahmedabad Insight

Ahmedabad has:

- Highest revenue
- Strong EBITDA%

Meaning:

Ahmedabad is the strongest-performing city overall.

Possible reasons:

- High demand
 - Efficient operations
 - Lower operational costs
-

Hyderabad Insight

Hyderabad also performs strongly.

EBITDA% is healthy.

Insight

Operations in Hyderabad are efficient and profitable.

Bangalore Insight

Bangalore generates good revenue.

But EBITDA% is slightly lower.

Insight

Possible reasons:

- Higher operating cost
- Higher rent
- Delivery expenses

Despite strong revenue, profitability efficiency is slightly lower.

Mumbai Insight

Mumbai shows lower EBITDA%.

Insight

Mumbai operations may have:

- Higher costs
- Lower efficiency
- Greater operational challenges

This city may need cost optimization.

Pune Insight

Pune shows decent operational performance.

Insight

Pune appears stable and balanced.

Not the highest performer, but operationally healthy.

8. Store Performance Matrix (Bubble Chart)

This is one of the most important charts.

It compares:

- Revenue
- EBITDA%
- Gross Margin%

Each bubble represents one kitchen.

What This Chart Helps Understand

It shows:

- Which stores earn high revenue
 - Which stores are highly profitable
 - Which stores are inefficient
-

Main Observation

Most stores follow a healthy upward trend.

Meaning:

Higher revenue generally leads to better EBITDA%.

Insight

Business operations scale efficiently.

This means:

As stores earn more revenue, profitability also improves.

This is a very positive sign.

Bubble Size Insight

Bubble size represents Gross Margin%.

Larger bubbles mean stronger contribution margins.

Insight

Some kitchens generate:

- High revenue
- High EBITDA
- High Gross Margin

These are ideal business units.

They represent:

- Best operational efficiency
 - Best profitability
 - Strong business models
-

Outlier Insight

A few stores show:

- High revenue
 - But lower EBITDA%
-

Insight

These stores may have:

- Excessive operating costs
- High wastage
- Poor operational management

Revenue alone does not guarantee profitability.

9. Top 10 EBITDA Stores

This table shows best-performing kitchens.

Observation

Top kitchens have:

- High revenue
 - Very high EBITDA%
 - Strong profitability
-

Insight

These stores are operational benchmarks.

The company should:

- Study these stores
 - Replicate their processes
 - Use them as expansion models
-

Additional Insight

These kitchens likely have:

- Strong local demand
 - Efficient staff management
 - Better inventory control
-

10. Bottom 10 EBITDA Stores

This table shows weakest-performing kitchens.

Observation

Some stores have:

- Very low EBITDA%
 - Even negative EBITDA
-

Insight

These stores are operationally weak.

Possible reasons:

- Poor location
 - Low order volume
 - High rent
 - Inventory wastage
 - Poor demand forecasting
-

Business Recommendation

Management should:

- Investigate these stores
 - Optimize costs
 - Improve operations
 - Consider restructuring if needed
-

Variance Dashboard Insights

11. Total Variance — ₹423.7L

What it means

Total operational mismatch across all kitchens.

Insight

The company still loses a noticeable amount due to operational inefficiencies.

Variance needs continuous monitoring.

12. High Variance Stores — 546

What it means

546 kitchens have variance above ₹25K.

Insight

This is a major operational concern.

Possible causes:

- Inventory leakage
- Food wastage
- Inefficient stock management

These stores require operational audits.

13. Variance Bucket Distribution

This chart groups stores into variance ranges.

Observation

Many stores fall into higher variance buckets.

Insight

Operational inefficiencies are widespread.

Even profitable kitchens may still waste money operationally.

14. Monthly Variance Trend

This tracks variance categories across months.

Observation

Variance remains relatively stable.

No major improvement appears over time.

Insight

Operational leakage is recurring.

This suggests systemic operational inefficiencies.

Not isolated problems.

15. Revenue Bucket Distribution

This groups stores based on revenue.

Observation

Most stores fall into medium-to-high revenue categories.

Insight

The business has a strong middle-performing segment.

Revenue distribution is healthy.

The business is not dependent on just a few kitchens.

16. Variance Heatmap

This compares variance% across cities.

Observation

Ahmedabad shows stronger concentration in some variance categories.

Insight

Even strong-performing cities may still have operational inefficiencies.

High revenue does not automatically mean operational perfection.

17. Variance vs Revenue Scatterplot

This compares:

- Revenue
- Variance

- EBITDA
-

Observation

Some high-revenue kitchens still show very high variance.

Most Important Insight

Revenue growth alone is not enough.

If variance is uncontrolled:

- Profitability suffers
- Operational leakage increases

The company must focus on:

- Operational discipline
- Inventory optimization
- Waste reduction

not just revenue growth.

18. City-wise Variance Chart

This compares total variance by city.

Observation

Ahmedabad has highest total variance.

Important Insight

Ahmedabad also has highest revenue.

Meaning:

Higher business scale naturally creates higher total variance.

But variance should still be optimized relative to revenue.

Final Business Conclusions

Financial Health

The business is financially strong.

Most kitchens are profitable.

Margins are healthy.

Operational Efficiency

Operations are generally stable.

But variance shows:

- Inventory inefficiency
- Wastage
- Leakage issues

still exist.

Strongest Cities

- Ahmedabad
- Hyderabad

show strongest overall performance.

Improvement Areas

- Mumbai profitability
 - High variance kitchens
 - Operational leakage control
-

Strategic Recommendations

The company should:

- Reduce wastage
 - Improve inventory forecasting
 - Audit high variance kitchens
 - Replicate top-performing store strategies
 - Optimize low EBITDA kitchens
-
